Monthly Pool Service Agreement

_____ per month

This weekly service is complete pool care that includes vacuuming, brushing, skimming, backwashing filter, emptying skimmer baskets, water testing & maintaining water balance, administering needed chemicals, cleaning of portable cleaner, and other tasks your pool requires to maintain optimum performance.

Imminent repairs or replacements of pool components, plumbing, etc. are not included in this weekly service. Issues that arise will be reported to you and arrangements will be made with the repair department to remedy.

* Pools and their surrounding environments are different in every backyard, thus requiring different additions of products and practices to achieve and maintain a beautiful pool. It's difficult to know what "recipe" of chemicals and products your pool will require and in what amounts until we can inspect it and get to know your pool's personality. We do practice preventive maintenance however. Products such as algacide, phosphate remover, filter-aid, metal control, water clarifier, etc. are used as deemed necessary by the service technician to ensure your pool is always at peak condition and performance.

* Your pool was visited and the following is a list of pool products that will be needed to maintain your pool. Keeping these products at your home will save you money, as well as save any confusion of what is added to your pool. As these products are used up, Cool Breeze will replenish them and add the cost to your monthly bill.

Initial: _____: I would like Cool Breeze Pools and Spas, Inc. to supply and replenish the following products automatically as they are used up.

These products and/or quantities can change. Precise calculation cannot be determined at this time. Some "fine tuning" will be necessary in the coming weeks. As always, Cool Breeze Pools and Spas, Inc. will only suggest and sell the products that your pool requires for optimum results.

Calcium, Muriatic Acid, Sodium Bicarbonate, Cyanuric Acid (stabilizer), and other water balancing products will be added in exact amounts as needed, and will not be necessary to be kept at your home.

*Maintaining proper water level is the responsibility of the pool owner.
